

Ethereal-Plugin installation guide

Feb. 1, 2006

During installation of the Ethereal software (executing the file ethereal-setup-0.10.13.exe) the following directory structure will be set-up:

To enable analyzing of EPL messages, the file "epl.dll" has to be copied to the directory "/Ethereal/plugins/0.10.13".

To improve the display of the EPL specific messages by using colours, the file "ETH_color" has to be copied to the folder "/Ethereal".

After starting the Ethereal software, received EPL messages are detected automatically and displayed in an enhanced way. To activate the colour display of EPL messages the following settings have to be made:

- Choose the menu "View" >> "Coloring Rules"
- Click on the button "Import" and select the file "ETH_color" which has been copied into the "/Ethereal" directory before. Open the file by using the button "Open". If additional colour rules are already active, the EPL colour rules have to be moved to the top by using the "Up" button.
- Confirm the settings with the "Ok" button

Further information about the installation and operation of the Ethereal software can be found on the following webpage: www.ethereal.com
